SKILLS

AI & ML Integration

AWS Personalize, SageMaker, OpenSearch, Recommender systems, AI document parsing, AI dynamic pricing

AI-Assisted Development

Claude Code — custom skills, plugins, MCP servers, automated QA

Backend

Node.js, NestJS, Fastify, Public API design, gRPC / Protobuf, RabbitMQ, Kafka, Node.js worker threads, Microservices & Monolith, Domain-Driven Design (DDD), CQRS

Databases

PostgreSQL, MySQL, MongoDB, ClickHouse, Redis, Elasticsearch / Kibana

Cloud & Infra

AWS, Docker, Kubernetes, Nginx, S3, Grafana, Datadog

Testing & Delivery

CI/CD, Cypress, integration & API testing

LANGUAGES

English

Polish

Ukrainian

Russian

EDUCATION

Bachelor's Degree

Jan Kochanowski University of Kielce

Oct 2017 – May 2021

RUSLAN POSTOIUK

SOFTWARE ENGINEER · BACKEND & AI

Software engineer with 7 years of experience building AI-powered backend systems and the production infrastructure that serves them at scale. My focus is turning machine-learning capabilities — document intelligence, dynamic pricing, and recommendation engines — into reliable, revenue-driving services on Node.js (NestJS, Fastify) and AWS.

This work sits on a strong engineering foundation: microservice, monolith, and domain-driven (DDD) architecture, public API design and third-party integrations, and hands-on database management and administration (MySQL, MongoDB).

EXPERIENCE

Software Engineer — **CarOnSale** (via Exadel) May 2025 – Present

Remote · Automotive B2B auction platform

Project / epic owner — led each of the initiatives below end-to-end, from technical design and stakeholder alignment through delivery and production rollout:

- ▶ **AI Report Parser** — Led development of an AI-powered parser that ingests and maps 10,000+ inspector vehicle PDF reports per month into our domain model, removing a major manual data-entry bottleneck.
- ▶ **AI Dynamic Pricing** — Owned the integration of an ML pricing model that replaced static, hardcoded auction-fee tiers with data-driven fees based on auction, buyer, and vehicle signals.
- ▶ **Public API (OEM integrations)** — Architected and delivered the public API powering integrations with Mercedes-Benz Italy and Volkswagen, letting major partners plug directly into the auction platform.
- ▶ **Mercedes-Benz Germany integration** — Drove a dedicated integration flow, adapting our system to MB Germany's requirements.
- ▶ **Auction Fees Refactor** — Sole owner of the auction commission/fee logic, rebuilt from the ground up.
- ▶ **Min Ask Price Refactor** — Led the refactor that unified minimum-ask-price visibility and behaviour across auctions, resolving inconsistent buyer-facing rules.

EXPERIENCE (CONTINUED)

Software Engineer — Flip

Nov 2023 – May 2025

Remote · Social-commerce platform

- ▶ Worked on a **\$1B+ social-commerce product** — the third-largest online store in the US — running at **500k+ requests/second across 400+ microservices** with a 100-strong backend team.
- ▶ Worked extensively with **AWS Personalize, SageMaker, Athena, and OpenSearch** to build the recommendation/personalization system and AI-serving infrastructure that delivered best-matched posts to users (TikTok-style feed).
- ▶ Built a microservice end-to-end — from architecture design to deploying the pod in Kubernetes — and owned quality analysis of the data feeding the personalization system.
- ▶ Managed Elasticsearch speed/batch processors and the reindexer.

Software Engineer — Stonly

Dec 2022 – Nov 2023

Cracow, Poland · On-site

- ▶ Delivered features with complex business logic in close coordination with an international business team.
- ▶ Designed and performed **zero-downtime data migrations** on high-volume production environments.
- ▶ Introduced and built an **API test framework from scratch** — architecture designed to run across all environments.
- ▶ Refactored legacy code into a clean architecture (SOLID, GRASP, GoF) and introduced feature flags.

Full Stack Developer — Listonic

May 2022 – Dec 2022

Kielce, Poland · Node.js / React

- ▶ Full-stack Node.js / React development with CRUD operations and hands-on database management.
- ▶ Contributed to the Lisek grocery store and the Listonic smart shopping-list app.

Backend Engineer — Simpól E-commerce

Nov 2019 – May 2022

Poland · Node.js, NestJS, TypeScript, AWS

- ▶ Backend engineer on an affiliate-marketing CRM system and an e-commerce online shop.
- ▶ Built and maintained backend services with Node.js, NestJS, and TypeScript on AWS.
